RE: Access for Well Installation
Flood Control Property Along the East Fork Chisolm Creek
East of the Safety-Kleen Facility on New York Avenue

Dear Mr. Jennings:

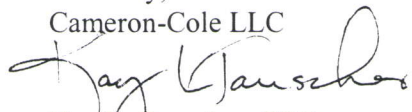

As we discussed today, Cameron-Cole LLC would like to install up to four monitoring wells on the property located along the East Fork Chisolm Creek, on behalf of Safety-Kleen (Wichita), Inc. This scope of work will be approved by the Kansas Department of Health & Environment (KDHE) and the U.S. Environmental Protection Agency (USEPA).

Initially, we will only install two shallow wells in the approximate locations shown on the attached map (See SK-10S and SK-11S) to a total depth of approximately 25 to 35 feet in depth, depending on the depth to groundwater in these locations. These wells will be installed in accordance with State Guidelines, as described in the work plan, which will be approved by the KDHE and USEPA prior to the well installation. If at a later date, it is decided that deeper wells are required in these locations, then a second, deeper well will be installed next to each of the shallow wells. These wells will likely be a total depth of approximately 45 feet.

Once installed, the wells will need to be accessed occasionally to develop, gauge, purge and sample, as required. Please let us know if you require notice prior to our work on the wells. We will notify you as soon as the drilling effort is scheduled for their installation. Please refer to the attached figure for the approximate locations of these proposed wells.

We look forward to working with you on this project. You may contact me at (303) 938-5535 if you have any questions on this matter.

Sincerely,
Cameron-Cole LLC
